

FOMOEgg 2.0

THE MOVEMENT

A community takeover built to set a new standard for transparency, participation, and collective creation.

MISSION

Build the world's most transparent, community-built meme ecosystem.

A project where the community does not just hold the token. We help shape what gets built around it, together.

VISION

Turn one token into a living community platform.

A platform built by thousands of people where every burn can be verified, every Race can be replayed, every treasury movement can be seen, and every person can contribute something.

WE ARE HERE TO SET THE STANDARD FOR COMMUNITY TAKEOVERS.

Not by saying we are the strongest. By building a movement people can verify, participate in, and point to as proof of what a community can accomplish together.

ONE EGG STARTED IT. THE COMMUNITY BECOMES THE MOVEMENT.

What we are here to build

Our movement is to build the world's most transparent, community-built meme ecosystem.

A project where the community does not just hold the token. We help shape what gets built around it. Every burn can be verified. Every Race can be replayed. Every treasury movement can be seen. Every person can contribute something.

THE TRANSFORMATION

We're transforming FOMOEgg from a token created by one developer into a living community platform built by thousands of people together.

From holders to builders. From a token to a community. From an experiment to a movement.

What would make this CTO historic?

Not a claim. Not a chart. Not one leader. The proof will be what the community builds together: transparent mechanics, replayable games, visible project resources, open contribution, resilient infrastructure, and a culture strong enough to keep creating beyond any one person.

A takeover becomes a movement when everyone can help shape what comes next.

What we stand for

Before products, games, marketing, or market cap comes the standard we choose to operate by.

01

CORE VALUE 1

TRUST BEFORE HYPE

We would rather earn confidence slowly than manufacture excitement quickly.

02

CORE VALUE 2

COMMUNITY BEFORE EGO

No single person is the project. Leadership serves the collective.

03

CORE VALUE 3

VERIFY BEFORE CLAIMING

Important numbers, burns, payouts, treasury movements, and Race results should be provable.

04

CORE VALUE 4

BUILD FOR THE LONG TERM

We are building something designed to outlive attention cycles and become more useful with time.

05

CORE VALUE 5

TRANSPARENCY BY DEFAULT

When something matters to the community, the community should be able to see it.

06

CORE VALUE 6

PROGRESS OVER PERFECTION

We will ship, learn, correct, document, and improve without pretending human error cannot happen.

What we believe together

01 We believe the community is the moat.

Code can be copied. Memes can be copied. A trusted community that keeps showing up is harder to copy.

02 We believe scarcity should be visible.

The burn is not a slogan. It should be measurable, traceable, and connected to the experience.

03 We believe participation should matter.

Theses, feedback, testing, creativity, moderation, and building should all have a place in the ecosystem.

04 We believe games should be fair.

No hidden winners. No invisible rules. Race results should be independently reproducible.

05 We believe project resources belong to the project.

Creator-side resources are intended to support burns, Race rewards, infrastructure, marketing, and documented community initiatives - not hidden personal extraction.

06 We believe a movement can become bigger than any one leader.

A CTO is not about replacing one owner with another. It is about preserving what worked and giving the community a framework to build what comes next together.

Everyone has a role

You do not need a title, a huge wallet, or technical skills to belong here. Holders, builders, creators, researchers, testers, moderators, storytellers, and newcomers all strengthen the movement in different ways.

01

COMMUNITY ROLE

HOLDERS

Protect the culture. Ask hard questions. Hold leadership accountable.

02

COMMUNITY ROLE

BUILDERS

Ship code, tools, automations, dashboards, games, and integrations.

03

COMMUNITY ROLE

CREATORS

Make the egg visible through art, memes, video, spaces, and storytelling.

04

COMMUNITY ROLE

RESEARCHERS

Verify numbers, wallets, mechanics, risks, and opportunities.

05

COMMUNITY ROLE

TESTERS

Break things before users do. Report bugs. Help us improve.

06

COMMUNITY ROLE

MODERATORS

Keep discussions useful, welcoming, factual, and safe.

07

COMMUNITY ROLE

STORYTELLERS

Explain the thesis simply so newcomers can understand what makes FOMOEgg different.

08

COMMUNITY ROLE

NEWCOMERS

Ask the questions the rest of us stopped noticing. Fresh eyes are valuable.

From a token to something we build together

We are not rebuilding FOMOEgg simply to preserve what existed. We are building a movement around what it can become, with a clear goal: create the world's most transparent, community-built meme ecosystem.

01 FOUNDATION

Original FOMOEgg token

Supply, burn history, progression, treasury visibility.

02 EXPERIENCE

Race + live thesis mechanics

Participation turns the token into an experience instead of a static asset.

03 TRUST LAYER

Verification + transparency

Public ledgers, replayable Races, burn proofs, treasury accounting.

04 COMMUNITY LAYER

Content + collaboration

Feedback, contributors, spaces, education, creative participation.

05 MOVEMENT

A community that creates

New games, tools, stories, experiments, and experiences that no single person could build alone.

Now. Next. Then. Beyond.

The roadmap is directional, not a promise of dates. Security, testing, community feedback, and verified integrations determine when each phase ships.

NOW

PHASE 1 - CONTINUITY

IN DEVELOPMENT

CTO transition, official community channels, original contract preservation, live burn verification, platform rebuild foundation, community policies.

NEXT

PHASE 2 - FOMOEgg 2.0 CORE

BUILD + TEST

Live thesis ingestion, burn engine, progression counter, Race rebuild, prize treasury, deterministic Race verification, mobile-first frontend.

THEN

PHASE 3 - VERIFY FOMOEgg

PLANNED

Public treasury dashboard, burn ledger, Race replay, rules versioning, status page, audit logs, community feedback system, open verification tools.

BEYOND

PHASE 4 - ECOSYSTEM

VISION

Additional games, community-created experiences, developer APIs, partnerships, education, new projects built around the original FOMOEgg.

Preserve the original. Improve the experience.

FOMOEgg 2.0 is a continuity project, not a replacement token. The goal is to preserve the original history and rebuild the experience around it with stronger transparency and resilience.

- **SAME TOKEN**

The community rebuild remains centered on the original FOMOEgg contract.

- **SAME BURN STORY**

Burned supply remains part of the project history. New burn activity should be verified on-chain.

- **SAME PARTICIPATION IDEA**

Theses, burns, progression, and Race mechanics remain central to the experience.

- **BETTER VERIFICATION**

FOMOEgg 2.0 should let anyone inspect the rules, transactions, Race inputs, results, and treasury.

- **BETTER RESILIENCE**

Critical systems should not depend on one hidden server, one person, or one undocumented process.

- **COMMUNITY CONTROLLED FUTURE**

Changes should be documented, versioned, explained, and open to feedback.

Built in public. Verified on-chain.

Transparency should not be a paragraph in the footer. It should be a product feature.

01

PUBLIC PROOF

EVERY THESIS

Source, timestamp, eligibility, burn job status.

02

PUBLIC PROOF

EVERY BUYBACK

Amount spent, execution price, transaction.

03

PUBLIC PROOF

EVERY BURN

Tokens destroyed, burn address, cumulative supply removed.

04

PUBLIC PROOF

EVERY RACE

Entrants, cutoff, seed commitment, reveal, ranking, replay.

05

PUBLIC PROOF

EVERY PRIZE

Winner, amount, wallet, payout transaction.

06

PUBLIC PROOF

EVERY PROJECT DOLLAR

Creator fees, treasury inflows, burns, Race, marketing, infrastructure, remaining balance.

Do not trust the operator. Verify the system.

We will make mistakes. We will not hide them.

FOMOEgg 2.0 is community-rebuilt software. Human and technical errors may happen, especially during early releases. Our standard is how we respond.

- 01 **DISCLOSE** Say what happened without spin.
- 02 **VERIFY** Separate confirmed facts from assumptions.
- 03 **CORRECT** Fix the issue safely and as quickly as possible.
- 04 **DOCUMENT** Preserve what changed and why.
- 05 **LEARN** Use the incident and community feedback to improve the system.

COMMUNITY DISCLOSURE

Nothing in this roadmap guarantees financial performance or investment returns. Roadmap items may change as security, testing, technical constraints, funding, and community feedback evolve. The commitment is to communicate material changes clearly and keep the original project history intact.

From holders to builders

The collective is not an audience. It is the movement. Every useful question, bug report, thesis, meme, test, idea, introduction, and contribution can make FOMOEgg stronger.

COMMUNITY SNAPSHOT

162M+ burned 1,472 holder addresses

Latest community snapshot - figures change over time and should be re-verified live.

What can you bring?

- Ask the question nobody else is asking.
- Test the product and report what breaks.
- Create something that makes the egg easier to understand.
- Help newcomers find verified information.
- Challenge the roadmap when you see a better path.
- Celebrate progress without hiding risk or mistakes.

Same egg. Same history. A movement built together.

FROM HOLDERS TO BUILDERS. FROM A TOKEN TO A COMMUNITY.

What can we accomplish together?

Our goal is not simply to revive a token. It is to prove that a community can inherit an idea, protect its foundations, make its mechanisms transparent, and collectively build an ecosystem around it that no single person could have created alone.

OUR TRANSFORMATION

From holders to builders.

From a token to a community.

From an experiment to a movement.

A movement with room for everyone

Leadership is service, not ownership. Development, marketing, research, content, testing, moderation, and ideas are open to contributors who want to help. No one person is FOMO Egg, and no one person should have to carry it alone.

Every person behind a wallet has a real life, responsibilities, and people they care about. We cannot promise outcomes or returns. What we can promise as a community standard is respect, transparency, honest communication, and the opportunity to participate in building something useful together.

One egg started it. The community becomes the movement.

BUILD IT. VERIFY IT. SHARE IT. IMPROVE IT. TOGETHER.
